

PASSWORD MANAGEMENT (IN LESS TIME THAN ORDERING PIZZA)

BIG SECURITY FOR SMALL BUSINESSES

PROTECT YOUR PASSWORDS SO THEY CAN PROTECT YOUR DATA

Passwords are an incredibly important part of securing your business and one of the most common vulnerabilities for companies. Here are four things you can do to secure and manage your passwords, in less time than it takes to order a pizza.

Check your passwords against known leaks

Stolen passwords are a common source of information loss, and allow attackers to gain control over your accounts. Check your commonly used passwords at haveibeenpwned.com to see if your passwords are on the leaked list.

Remove the duplicates

Reusing passwords means that if you have one account breach, an attacker will be able to use that password on other sites. Take inventory of where you're using the same passwords and use different passwords for each account you have so if one is breached, others won't be at risk.

Power up your p@\$\$w0rd\$

Not all passwords are created equally. Long passwords, passwords that use a combination of letters, numbers, and special characters, and passwords that avoid common phrases are all harder to crack than short, popular passwords.

Enlist the help of a password manager

There are a number of different security applications that can generate strong passwords and store your account details so you don't have to keep them in that beautiful brain of yours. Record your passwords in a password manager, and use the tools to create new strong passwords when you need a new account.
